Then, it turned around and looked at me. I couldn't see a face underneath the darkness of it's helm, but there's no way anything human is inside that armor...

I first saw this game on greenlight ages ago, and I'm glad they were able to release it! Controls are a bit awkward at the start, as you have to use both mouse and keyboard to navigate the menu, but you quickly get the hang of it. As someone who has played a lot of management game, this one is a very good example of the genre. Complete control, have a lot of basic pizzas or really complicated ones, invest heavily in advertising or not, it's up to you. I've only played a couple hours so far, but I plan to play a lot more :)

. This music DLC will make you want to attack everyone!. love it, old school dungeon crawler with a cool twist that makes it something unique! hope to see more from this publisher soon.. It's total ♥♥♥♥♥♥♥♥♥♥t : Awful user experience, high price for no quality, total clueless game...

Sad.... I played only 20 mins on this game and decided to get a refund. This new release dissappoints me, or maybe I expect too much from this new season. I owned previous MotoGP versions and I admit there was a improvement in PhysX (it is more playable for new players of this game compare to previous season) but that's all. It is really far behind from new and past racing games I played specially on the graphics side. I love MotoGP but not this game, I prefer just to play 17 version for now and save this money for much decent games I think.

Maybe I would rather choose motogp 17 with 2018 PhysX in my opinion.. Probably the best game I have ever played in my entire life, soo much content it is unreal, the mechanics in the game are the most advanced ever, and the graphics are extraordinary.. All the girls in this game are my new waifu's. I'm in a harem, don't judge me nerds.. I was one of the ones fortunate enough to get the game working.

Unfortunately despite playing it on a machine with 12G of Ram and a decent graphics card, this simple game plays at a stunning 5 fps at best.

It takes 15 or so seconds to move just one tile rendering the game pointless.

Really nice mod but still waiting for new factions etc... its been 4.5 years now :/. Fun little roguelike with permanent upgrades. A tad slowpaced, but also incredibly cheap. Well worth the money!. Very nice route. Pretty similar to Albula (those routes actually connect so you can have both as one combined route thanks to workshop merger) but this one is a little easier to comprehend. There are some more straight parts, more open spaces. It is still a very high mountain route with a lot of slow curves, tunnels and bridges.

I like the stop on request feature which adds little life to the route. There are also roads with vehicles around. For me Albula even though a real life route, still looks a bit insane, more like a roller-coaster. Therefore I would recommend Bernina over Albula although both of these routes are beautiful and very well made.

Only one flaw which I noticed are signals at the end of some stations - even though the switch is set to turn, they show no restricted speed. Not sure why. The speed limits on the route are nicely marked so it is possible to drive it hudeless without even taking a lot of notes. I think there is one flawed marker (leaving Alp Gruem to the south) but it's just a detail.

The Allegra is nicely modelled. Physics is OK. Driving with automatic speed controll is pretty easy so the experience is quite relaxing. The route might seem short (~50km) but due to low driving speeds it feels much longer than that. The whole journey on combined routes (Albula+Bernina) from Thusis to Poschiavo takes more than 2 hours and a half. Hopefully the route will be extended futher down to Italy in future.. it doesn't work.. Why?

The costume damage feature is not available in the Steam version.
